ON GRID SYSTEM

We are providing electric energy for your home, office and storage with ON GRID system. ON GRID system can work either independently from electric network or with electric network system.

Properties

- On Grid system offers total, flexible and productive solutions with its professional engineering design.
- Maximum productivity is provided with outstanding charge control software and setup.
- On Grid supplies energy to network or it can be used by setting up on self consumption modes.

Areas of Usage

- Houses and commercial buildings with network system.
Houses and commercial buildings without network system.
- **Micro SES Facilities (Roof systems under 10 kW)**
It becomes easy to setup under 10 kW facilities for houses, buildings and storages with regulation in 2018.

OFF GRID SYSTEM (BATTERY SYSTEM)

Off Grid system offers total and productive solutions with its professional engineering design

Properties

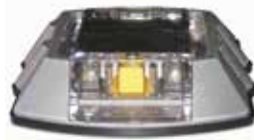

- Off Grid parts provide trusted and esthetics solutions with their compact and easy set-up properties.
- Stored energy in battery can be used when it is needed.

Areas of Usage

- Off Grid systems can be used in vineyards, farms, worksites and these kinds of places that do not have electric network to run electric devices and lighting.
- It can be used to store energy with electric network and generator for backup usage.
- No bureaucratic process available.
- Easy setup is available.
- You can set the system up in any place.
- It does not affect from blackout.

ALL IN ONE! SOLAR LIGHTING SYSTEMS

LIGHTNING

Landscape and Garden Lightning

We have imported and mass production ready solar system tools for street and garden lightning. We are designing special lightning poles

Totem

We can lighten signboards with various power and size. We are designing oautomatic passage systems for day and night conditions.

Traffic Lighting

We are providing traffic flashers and road lightning devices for official and private corporations.

AGRICULTURAL IRRIGATION

Providing solar systems for your agricultural irrigation.

Properties

- We are designing special systems for you after receiving well depth (meter), distance of conduction and intended pumping quantity (ton/hour) information.
- Our design can work on cloudy weathers or with horizontal sun beams efficiently.
- You can irrigate your farm without needing energy storage.
- Agriculture Mobile provides easy and practical solutions with station and stand panel setup functions.

Areas of Usage

It can be used in agricultural areas, gardens, plant-houses and vineyards either with electric network or without electric network.

WORKING DISCIPLINE
